

Winter Weather Briefing

Sunday, February 15, 2015

For South Central Indiana and Central Kentucky

*Significant Winter Storm Expected Tonight
Into Monday*

Prepared 2/15/2015 4:26 PM EST

National Weather Service – Louisville, Kentucky

NWSLouisville

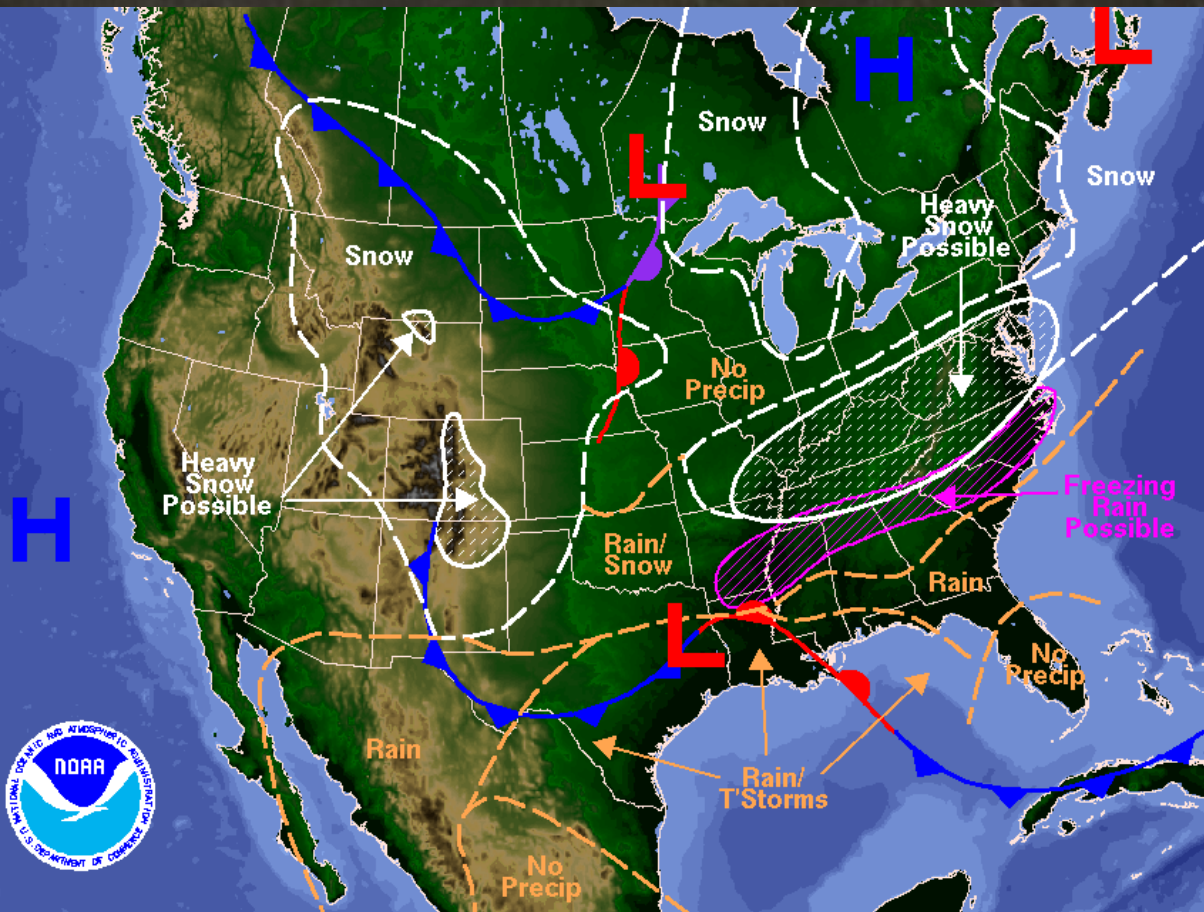

National Weather Service Louisville

@NWSLouisville

Overview

- A low pressure system will move across the Deep South Monday. As it does so it will bring plenty of moisture into our region
- Cold air in place ahead of this moisture will mean any precipitation that falls will be in the form of a dry snow.

Expected Impacts

Timing: Snow will begin to fall around midnight west of the I-65 corridor and spread eastward through the overnight hours. The heaviest snowfall is expected between daybreak Monday and early afternoon Monday.

Snow Accumulations: Accumulations of 4"-10" will be possible across southern Indiana. 8"-12" will be possible along and south of the I-64 corridor, with 10"-15" expected over a portion of central Kentucky.

Road Impacts: Arctic air in place ahead of these snows will mean the snow will accumulate quickly on area roadways. Given the expected amounts, travel will be **dangerous** to near **impossible** late tonight into Monday. Additionally, temperatures in the upper teens and 20s may cause some road chemicals to be ineffective.

Aviation Impacts: IFR or worse conditions are likely at all sites, with the worst conditions after Midnight Sunday night and continuing through the day Monday.

Bitterly Cold Behind Storm: Bitterly temperatures will follow the storm for mid to late week with temperatures falling below zero Thursday and Friday mornings. Temperatures will not rise above freezing until Saturday.
